

Topography

This is actually not a map, but a 3D model which comes from the original project development plans. It holds little value to those who can understand the topography map, but the those who can't, this gives some idea of our altitude spectrum.

The quality of this map is less than ideal but gives some indication of the lie of the land. For those unfamiliar with maps: each line represents a specific height and therefore the closer lines are together, the steeper the incline.

Highlands WILDERNESS
